# Spring Cloud Data Flow for VMware GemFire Documentation

Spring Cloud Dataflow for VMware Tanzu GemFire is a project that defines integration with the [Spring Cloud Stream](#) and [Spring Cloud Stream Applications](#) projects.

The published artifacts are:

- `gemfire-source-rabbit`
- `gemfire-sink-rabbit`
- `gemfire-source-kafka`
- `gemfire-sink-kafka`

These artifacts are then “installed” into a [Spring Cloud Dataflow Server](#) in order to receive or send data from VMware Tanzu GemFire instances.

# Release Notes

This topic contains the release notes for Spring Cloud Dataflow for VMware GemFire.

## 1.0.0

- Initial release of Spring Cloud Stream AppsFor VMware Tanzu GemFire, for Spring Cloud Dataflow Server [2.10.x](#) and [2.11.1](#) and VMware GemFire [9.15.x](#) and [10.0.x](#).
    - This includes bindings for RabbitMQ and Kafka.
    - gemfire-source-rabbit
    - gemfire-sink-rabbit
    - gemfire-source-kafka
    - gemfire-sink-kafka
-

# Compatibility and Versions

This topic list Spring Cloud Dataflow for VMware GemFire compatibility and versions.

## Compatibility

Spring Cloud Stream App Artifact	Latest Versions	Compatible GemFire Versions	Compatible Spring Cloud Dataflow Server	Compatible Spring Boot Versions
gemfire-source-rabbit	1.0.0	9.15+, 10.0+	2.10+ , 2.11+	2.7.x
gemfire-source-kafka	1.0.0	9.15+, 10.0+	2.10+, 2.11+	2.7.x
gemfire-sink-rabbit	1.0.0	9.15+, 10.0+	2.10+, 2.11+	2.7.x
gemfire-sink-kafka	1.0.0	9.15+, 10.0+	2.10+, 2.11+	2.7.x

# Getting Started

This topic explains how to download Spring Cloud Dataflow for VMware GemFire libraries to a project.

The Spring Cloud Dataflow for VMware GemFire libraries are available from [Docker Hub](#) or the [Pivotal Commercial Maven Repository](#). Access to the Pivotal Commercial Maven Repository requires a one-time registration step to create an account.

## Pull Images from Docker Hub

The images can be retrieved from Docker Hub simply by running `docker pull gemfire/<image name>:<version>` with the desired image

## Access the Commercial Maven Repository

1. In a browser, navigate to the [Pivotal Commercial Maven Repository](#).
2. Click the **Create Account** link.
3. Complete the information in the registration page.
4. Click **Register**.
5. After registering, you will receive a confirmation email. Follow the instruction in this email to activate your account.
6. After account activation, log in to the [Pivotal Commercial Maven Repository](#) to access the configuration information found in [gemfire-release-repo](#).

## Installing Into Spring Cloud Data Flow

This project provides implementations for VMware Tanzu GemFire with Kafka and RabbitMQ bindings.

For detailed information on installing each implementation into a Spring Cloud Data Flow server, refer to the following:

- [GemFire Source RabbitMQ](#)
- [GemFire Sink RabbitMQ](#)
- [GemFire Source Kafka](#)
- [GemFire Sink Kafka](#)

## GemFire Source Rabbit

## Getting started:

If retrieving artifacts from the commercial Maven repository:

### Docker Hub Images

1. Log in to your Spring Cloud Dataflow Server.
2. Add the Application using the **Add Application** button.
3. Select the first option **Register one or more applications**.
4. Add a name in the `Name` field.
5. For `Type`, select `source`.
6. For `Spring Boot version`, select the appropriate version.
7. For `URI`, enter `docker://docker.io/gemfire/gemfire-source-rabbit:1.0.0`
8. Click **Import Application** to import the GemFire Source for Rabbit Stream Application.

## Commercial Maven Repository Artifacts

In order to use this Spring Cloud Stream App you need to deploy the artifacts into the SCFD Server use the following steps:

1. Follow the [Getting Started](#) guide to get access to the Commercial Maven Repository.
2. Download the GemFire Source Rabbit artifact `wget https://commercial-repo.pivotal.io/data3/gemfire-release-repo/gemfire/com/vmware/gemfire/spring/cloud/stream/app/gemfire-source-rabbit/1.0.0/gemfire-source-rabbit-1.0.0.jar --user {commercialMavenRepoUsername} --ask-password`
3. Download the GemFire Source Rabbit Metadata artifact `wget https://commercial-repo.pivotal.io/data3/gemfire-release-repo/gemfire/com/vmware/gemfire/spring/cloud/stream/app/gemfire-source-rabbit/1.0.0/gemfire-source-rabbit-1.0.0-metadata.jar --user {commercialMavenRepoUsername} --ask-password`
4. Log in to your Spring Cloud Dataflow Server.
5. Add the Application using the **Add Application** button.
6. Select the third option, **Import application coordinates from properties file**.
7. Add the `source` properties, replacing `{artifactFileName}` with the location of the downloaded artifacts from step 1.

```
source.gemfire=file://{artifactFileName}
source.gemfire.metadata=file://{artifactMetadataFileName}
```

8. Click **Import Application** to import the GemFire Source for Rabbit Stream Application.

## Properties:

## gemfire.client

Property Name	Description	Type	Defaults
pdx-read-serialized	Deserialize the GemFire objects into PdxInstance instead of the domain class.	Boolean	false

## gemfire.pool

Property Name	Description	Type	Defaults
connect-type	Specifies connection type: 'server' or 'locator'.	ConnectType	
host-addresses	Specifies one or more GemFire locator or server addresses formatted as [host]:[port].	InetSocketAddress[]	
subscription-enabled	Set to true to enable subscriptions for the client pool. Required to sync updates to the client cache.	Boolean	false

## gemfire.region

Property Name	Description	Type	Defaults
region-name	The region name.	String	

## gemfire.security

Property Name	Description	Type	Defaults
password	The cache password.	String	
username	The cache username.	String	

## gemfire.security.ssl

Property Name	Description	Type	Defaults
ciphers	Configures the SSL ciphers used for secure Socket connections as an array of valid cipher names.	String	any
keystore-type	Identifies the type of Keystore used for SSL communications (e.g. JKS, PKCS11, etc.).	String	JKS
keystore-uri	Location of the pre-created Keystore URI to be used for connecting to the GemFire cluster.	Resource	
ssl-keystore-password	Password for accessing the keys truststore.	String	
ssl-truststore-password	Password for accessing the trust store.	String	
truststore-type	Identifies the type of truststore used for SSL communications (e.g. JKS, PKCS11, etc.).	String	JKS

truststore-uri	Location of the pre-created truststore URI to be used for connecting to the GemFire cluster.	Resource	
user-home-directory	Local directory to cache the truststore and keystore files downloaded from the truststoreUri and keystoreUri locations.	String	user.home

## gemfire.supplier

Property Name	Description	Type	Defaults
event-expression	SpEL expression to extract data from an {@link org.apache.geode.cache.EntryEvent} or {@link org.apache.geode.cache.query.CqEvent}.	Expression	
query	An OQL query. This will enable continuous query if provided.	String	

## GemFire Sink Rabbit\*\*

### Getting started:

There are two methods to deploy the artifacts into the Spring Cloud Dataflow Server: using the images from Docker Hub or the artifacts downloaded from the commercial Maven repository.

### Docker Hub Images

1. Log in to your Spring Cloud Dataflow Server.
2. Add the Application using the **Add Application** button.
3. Select the first option **Register one or more applications**.
4. Add a name in the `Name` field.
5. For `Type`, select `sink`.
6. For `Spring Boot version`, select the appropriate version.
7. For `URI`, enter `docker://docker.io/gemfire/gemfire-sink-rabbit:1.0.0`
8. Click **Import Application** to import the GemFire Sink for Rabbit Stream Application.

## Commercial Maven Repository Artifacts

In order to use this Spring Cloud Stream App you need to deploy the artifacts into the SCFD Server use the following steps:

1. Follow the [Getting Started](#) guide to get access to the Commercial Maven Repository.
2. Download the GemFire Sink Rabbit artifact `wget https://commercial-repo.pivotal.io/data3/gemfire-release-repo/gemfire/com/vmware/gemfire/spring/cloud/stream/app/gemfire-sink-rabbit/1.0.0/gemfire-sink-rabbit-1.0.0.jar --user {commercialMavenRepoUsername} --ask-password`

- Download the GemFire Sink Rabbit Metadata artifact `wget https://commercial-repo.pivotal.io/data3/gemfire-release-repo/gemfire/com/vmware/gemfire/spring/cloud/stream/app/gemfire-sink-rabbit/1.0.0/gemfire-sink-rabbit-1.0.0-metadata.jar --user {commercialMavenRepoUsername} --ask-password`
- Log in to your Spring Cloud Dataflow Server.
- Add the Application using the **Add Application** button.
- Select the third option, **Import application coordinates from properties file**.
- Add the `sink` properties, replacing `{artifactFileName}` with the location of the downloaded artifacts from step 1.

```
sink.gemfire=file://{artifactFileName}
sink.gemfire.metadata=file://{artifactMetadataFileName}
```

- Click **Import Application** to import the GemFire Sink for Rabbit Stream Application.

## Properties:

### gemfire.consumer

Property Name	Description	Type	Defaults
json	Indicates if the GemFire region stores json objects as PdxInstance.	Boolean	false
key-expression	SpEL expression to use as a cache key.	String	

### gemfire.pool

Property Name	Description	Type	Defaults
connect-type	Specifies connection type: 'server' or 'locator'.	ConnectType	
host-addresses	Specifies one or more GemFire locator or server addresses formatted as [host]:[port].	InetSocketAddress[]	
subscription-enabled	Set to true to enable subscriptions for the client pool. Required to sync updates to the client cache.	Boolean	false

### gemfire.region

Property Name	Description	Type	Defaults
region-name	The region name.	String	

### gemfire.security

Property Name	Description	Type	Defaults
password	The cache password.	String	

username	The cache username.	String
----------	---------------------	--------

## gemfire.security.ssl

Property Name	Description	Type	Defaults
ciphers	Configures the SSL ciphers used for secure Socket connections as an array of valid cipher names.	String	any
keystore-type	Identifies the type of Keystore used for SSL communications (e.g. JKS, PKCS11, etc.).	String	JKS
keystore-uri	Location of the pre-created Keystore URI to be used for connecting to the GemFire cluster.	Resource	
ssl-keystore-password	Password for accessing the keys truststore.	String	
ssl-truststore-password	Password for accessing the trust store.	String	
truststore-type	Identifies the type of truststore used for SSL communications (e.g. JKS, PKCS11, etc.).	String	JKS
truststore-uri	Location of the pre-created truststore URI to be used for connecting to the GemFire cluster.	Resource	
user-home-directory	Local directory to cache the truststore and keystore files downloaded from the truststoreUri and keystoreUri locations.	String	user.home

## GemFire Source Kafka

### Getting started:

There are two methods to deploy the artifacts into the Spring Cloud Dataflow Server: using the images from Docker Hub or the artifacts downloaded from the commercial Maven repository.

### Docker Hub Images

1. Log in to your Spring Cloud Dataflow Server.
2. Add the Application using the **Add Application** button.
3. Select the first option **Register one or more applications**.
4. Add a name in the `Name` field.
5. For `Type`, select `source`.
6. For `Spring Boot version`, select the appropriate version.
7. For `URI`, enter `docker://docker.io/gemfire/gemfire-source-kafka:1.0.0`
8. Click **Import Application** to import the GemFire Source for Kafka Stream Application.

## Commercial Maven Repository Artifacts

In order to use this Spring Cloud Stream App you need to deploy the artifacts into the SCFD Server use the following steps:

1. Follow the [Getting Started](#) guide to get access to the Commercial Maven Repository.
2. Download the GemFire Source Kafka artifact `wget https://commercial-repo.pivotal.io/data3/gemfire-release-repo/gemfire/com/vmware/gemfire/spring/cloud/stream/app/gemfire-source-kafka/1.0.0/gemfire-source-kafka-1.0.0.jar --user {commercialMavenRepoUsername} --ask-password`
3. Download the GemFire Source Kafka Metadata artifact `wget https://commercial-repo.pivotal.io/data3/gemfire-release-repo/gemfire/com/vmware/gemfire/spring/cloud/stream/app/gemfire-source-kafka/1.0.0/gemfire-source-kafka-1.0.0-metadata.jar --user {commercialMavenRepoUsername} --ask-password`
4. Log in to your Spring Cloud Dataflow Server.
5. Add the Application using the **Add Application** button.
6. Select the third option, **Import application coordinates from properties file**.
7. Add the `source` properties, replacing `{artifactFileName}` with the location of the downloaded artifacts from step 1.

```
source.gemfire=file://{artifactFileName}
source.gemfire.metadata=file://{artifactMetadataFileName}
```

8. Click **Import Application** to import the GemFire Source for Kafka Stream Application.

## Properties:

### gemfire.client

Property Name	Description	Type	Defaults
pdx-read-serialized	Deserialize the GemFire objects into PdxInstance instead of the domain class.	Boolean	false

### gemfire.pool

Property Name	Description	Type	Defaults
connect-type	Specifies connection type: 'server' or 'locator'.	ConnectType	
host-addresses	Specifies one or more GemFire locator or server addresses formatted as [host]:[port].	InetSocketAddress[]	
subscription-enabled	Set to true to enable subscriptions for the client pool. Required to sync updates to the client cache.	Boolean	false

### gemfire.region

Property Name	Description	Type	Defaults
region-name	The region name.	String	

## gemfire.security

Property Name	Description	Type	Defaults
password	The cache password.	String	
username	The cache username.	String	

## gemfire.security.ssl

Property Name	Description	Type	Defaults
ciphers	Configures the SSL ciphers used for secure Socket connections as an array of valid cipher names.	String	any
keystore-type	Identifies the type of Keystore used for SSL communications (e.g. JKS, PKCS11, etc.).	String	JKS
keystore-uri	Location of the pre-created Keystore URI to be used for connecting to the GemFire cluster.	Resource	
ssl-keystore-password	Password for accessing the keys truststore.	String	
ssl-truststore-password	Password for accessing the trust store.	String	
truststore-type	Identifies the type of truststore used for SSL communications (e.g. JKS, PKCS11, etc.).	String	JKS
truststore-uri	Location of the pre-created truststore URI to be used for connecting to the GemFire cluster.	Resource	
user-home-directory	Local directory to cache the truststore and keystore files downloaded from the truststoreUri and keystoreUri locations.	String	user.home

## gemfire.supplier

Property Name	Description	Type	Defaults
event-expression	SpEL expression to extract data from an {@link org.apache.geode.cache.EntryEvent} or {@link org.apache.geode.cache.query.CqEvent}.	Expression	
query	An OQL query. This will enable continuous query if provided.	String	

## GemFire Sink Kafka

### Getting started:

There are two methods to deploy the artifacts into the Spring Cloud Dataflow Server: using the images from Docker Hub or the artifacts downloaded from the commercial Maven repository.

## Docker Hub Images

1. Log in to your Spring Cloud Dataflow Server.
2. Add the Application using the **Add Application** button.
3. Select the first option **Register one or more applications**.
4. Add a name in the `Name` field.
5. For `Type`, select `sink`.
6. For `Spring Boot version`, select the appropriate version.
7. For `URI`, enter `docker://docker.io/gemfire/gemfire-sink-kafka:1.0.0`
8. Click **Import Application** to import the GemFire Sink for Kafka Stream Application.

## Commercial Maven Repository Artifacts

In order to use this Spring Cloud Stream App you need to deploy the artifacts into the SCFD Server use the following steps:

1. Follow the [Getting Started](#) guide to get access to the Commercial Maven Repository.
2. Download the GemFire Sink Kafka artifact `wget https://commercial-repo.pivotal.io/data3/gemfire-release-repo/gemfire/com/vmware/gemfire/spring/cloud/stream/app/gemfire-sink-kafka/1.0.0/gemfire-ink-kafka-1.0.0.jar --user {commercialMavenRepoUsername} --ask-password`
3. Download the GemFire Sink Kafka Metadata artifact `wget https://commercial-repo.pivotal.io/data3/gemfire-release-repo/gemfire/com/vmware/gemfire/spring/cloud/stream/app/gemfire-sink-kafka/1.0.0/gemfire-sink-kafka-1.0.0-metadata.jar --user {commercialMavenRepoUsername} --ask-password`
4. Log in to your Spring Cloud Dataflow Server.
5. Add the Application using the **Add Application** button.
6. Select the third option, **Import application coordinates from properties file**.
7. Add the `sink` properties, replacing `{artifactFileName}` with the location of the downloaded artifacts from step 1.

```
sink.gemfire=file://{artifactFileName}
sink.gemfire.metadata=file://{artifactMetadataFileName}
```

8. Click **Import Application** to import the GemFire Sink for Kafka Stream Application.

## Properties:

## gemfire.consumer

Property Name	Description	Type	Defaults
json	Indicates if the GemFire region stores json objects as PdxInstance.	Boolean	false
key-expression	SpEL expression to use as a cache key.	String	

## gemfire.pool

Property Name	Description	Type	Defaults
connect-type	Specifies connection type: 'server' or 'locator'.	ConnectType	
host-addresses	Specifies one or more GemFire locator or server addresses formatted as [host]:[port].	InetSocketAddress[]	
subscription-enabled	Set to true to enable subscriptions for the client pool. Required to sync updates to the client cache.	Boolean	false

## gemfire.region

Property Name	Description	Type	Defaults
region-name	The region name.	String	

## gemfire.security

Property Name	Description	Type	Defaults
password	The cache password.	String	
username	The cache username.	String	

## gemfire.security.ssl

Property Name	Description	Type	Defaults
ciphers	Configures the SSL ciphers used for secure Socket connections as an array of valid cipher names.	String	any
keystore-type	Identifies the type of Keystore used for SSL communications (e.g. JKS, PKCS11, etc.).	String	JKS
keystore-uri	Location of the pre-created Keystore URI to be used for connecting to the GemFire cluster.	Resource	
ssl-keystore-password	Password for accessing the keys truststore.	String	
ssl-truststore-password	Password for accessing the trust store.	String	
truststore-type	Identifies the type of truststore used for SSL communications (e.g. JKS, PKCS11, etc.).	String	JKS

---

truststore-uri	Location of the pre-created truststore URI to be used for connecting to the GemFire cluster.	Resource
user-home-directory	Local directory to cache the truststore and keystore files downloaded from the truststoreUri and keystoreUri locations.	String user.home

---
